

Submission 15

I have recently come to the knowledge that ABC 2 content is restricted by **federal** government interference.

My question is simple.

Why should any government be involved in the commercial content of television.

Television is like any other product - a cabbage or bread and requires no interference from any level of government.

Save all this enquiry and decide that governments in a **free democracy** should be involved or interfere in any way with the content of any televisions channel.

This of course will make politicians obsolete so you folks will conveniently ignore this submission.
